

CITY: Civic Innovation Through You!

Team 02

Overview

Today's civic platforms connect citizens and officials, but fail to build lasting trust and relationships.

Citizens raise everyday issues, but rarely see what happens next, while officials receive requests without full context or shared priorities. As a result, participation becomes one-time and repetitive, and trust is never meaningfully accumulated. This project aims to address this gap by proposing a new participation model where citizens and officials grow together.

Background

Citizens

People care—but many don't speak up because it feels like their voice won't matter.

Pew: 85% say most officials don't care what people like them think; OECD: trust is 69% vs 22% depending on perceived voice.

That's why CITY is Reddit-style: post, discuss, upvote—so civic input becomes visible and socially validated.

OECD (2024). OECD Survey on Drivers of Trust in Public Institutions – 2024 Results (voice → trust gap 69% vs 22%).

Pew Research Center (Apr 30, 2024). More than 80% of Americans believe elected officials don't care what people like them think (reports July 2023 = 85%).

Background

Officials

In systems like NYC 311, a small number of issue types account for a majority of service requests. While this suggests clear patterns, each request is still processed as an individual case. For city officials, this creates a heavy administrative burden: thousands of repeated complaints, fragmented across time and locations, with little context, prioritization, or consolidation. As a result, officials spend more time managing volume than understanding root causes or planning long-term solutions.

Persona

Citizen

David Kim

Age : 54

Location : Bellevue

Former IT industry professional

Language : English, Korean

Sharing my opinion isn't hard.
The problem is I can't see happens next.

Pain Points

Civic Engagement Platform Oversimplified
Survey-oriented structure
a lack of depth of opinion
Policy suggestions do not connect to execution phase
Lack of space for technical and administrative context

Needs

Refined Policy Proposition Structure
Visualizing the connection between
citizen opinion and administrative logic
Idea → Review → Clear reflection/pending flow

Official

Lisa Chen

Age : 35

Location : Seattle

City Transportation Officer

Language : English

We receive hundreds of reports, but it's hard
to tell what truly matters to the community.

Pain Points

Too many fragmented reports across channels
No clear signal of collective priority
Difficult to communicate progress back to citizens
Public trust decreases when feedback is delayed

Needs

Clear prioritization signals from citizens
A transparent way to show review & progress
Reduced repetitive and duplicate reports
A single interface to manage civic feedback

Solution

Reddit-style civic forum: residents post, comment, and upvote to create clear community signals.
Visible progress: officials publish status updates (Under Review → Planned → Implemented) to show what happens next.
Share → Reward → Return: shareable milestones + rewards + notifications bring users back.

Gamification

THE PSYCHOLOGY BEHIND DUOLINGO'S ADDICTIVE LEARNING STREAK SYSTEM

CITY combines proven gamification mechanics by analyzing Duolingo's habit-forming loops, Reddit's collective prioritization system, and Naver Knowledge iN's trust-based reputation model. Rather than short-term rewards, CITY is designed around a participation → recognition → trust-building cycle, where citizen actions lead to meaningful, real-world impact.

Ranks

Badges

- Rank increases only when a user's post or service request is officially reviewed, adopted, or processed.
- Rank reflects whether a user has consistently contributed proposals that are administratively useful.
- Enables public officials to quickly identify proposals from trusted contributors.
- Serves as a prioritization signal during the review process.

- Badges are earned through actions such as writing posts, leaving comments, or participating in discussions.
- Badges are designed to be earned relatively quickly.
- Lowers the barrier to participation.
- Encourages continued engagement with the platform.
- Makes user activity visible at a glance.

How it works

Verified Identity

One phone number, one account — ensuring trust and preventing spam.

Location-Based

CITY is a location-based platform where users can set locations, like home and work or school, with changes allowed every two weeks.

Reddit style

CITY has a Reddit-style feed where civic posts rise with engagement.

How it works

CITY helps officials prioritize posts based on citizen engagement, using upvotes, comments, and momentum, like a faster, social petition system.

CITY drives growth through a share-and-reward loop: users share posts publicly, earn rewards, and new viewers sign up, inspired by Toss and KakaoBank's sharing mechanics.

CITY uses a Reddit-style karma system where upvotes boost users' trustworthiness, signaling genuine contributions and enhancing the app's overall value.

Platform Introduction

This platform allows citizens to easily share everyday issues and engage with others through voting and feedback. By applying gamification, it transforms one-time complaints into continuous civic participation, while helping cities make better decisions based on structured, data-driven insights.

Profile Verification

After logging in to the platform, clicking on your profile allows you to view an experience point system based on your activity. You can see your past ideas and opinions you've posted, and these are leveled up and displayed on your profile.

Rather than making formal suggestions, it aims to facilitate easy expression of opinions and free discussion by adopting the format of social media. This allows individuals to present their views easily and freely.

Platform Introduction

This platform allows citizens to easily share everyday issues and engage with others through voting and feedback. By applying gamification, it transforms one-time complaints into continuous civic participation, while helping cities make better decisions based on structured, data-driven insights.

Community Management

When logged in as an admin rather than a citizen, features appear that address the needs of administrative personnel. These allow for the management of opinions submitted by multiple citizens. Furthermore, as it is a community-based platform, it manages comments and posts from interacting general citizens. This enables more ideal platform operation.

Administrator Role

After citizens submit various opinions, the system displays the status of those opinions as "In Progress," "Under Review," or "Being Implemented," sharing the processing stage of each suggestion. This allows citizens to view the progress status of their submitted opinions.

Platform Introduction

This platform allows citizens to easily share everyday issues and engage with others through voting and feedback. By applying gamification, it transforms one-time complaints into continuous civic participation, while helping cities make better decisions based on structured, data-driven insights.

Admin View

City Officials will act as administrators, they will be able to track engagement in certain topics throughout the platform, view submitted ideas from community feedback, create posts based on the prior community ideas, and manage users and posts to ensure discussions stay on topic and constructive.

Engagement at a Glance

Trending Conversations

Hypothesis

Case 1

Visibility of Post-Participation Processes Increases Re-Engagement

Hypothesis

When citizens can clearly see what happens after they submit a proposal, they are more likely to participate again.

Validation Method

A: Only shows "Submission Completed"

B: Shows a timeline

Submitted → Reviewed →
Discussed → Implemented /
On Hold

Participants review both
screens and answer a survey.

Key Metrics

Re-engagement intention
(5-point Likert scale)
Agreement rate with
"I would participate again"
Platform trust score

What We Test

Whether visualizing the
process
→ increases trust and
re-participation intent

Hypothesis

Case 2

Gamification Encourages Sustained Civic Participation

Hypothesis

Civic participation is more likely to continue when it feels motivating and rewarding, rather than purely obligatory.

Validation Method

Short-term participation experiment (approx. 1 week)
Group A: No rewards
Group B: Points or badges for each contribution
Compare participation behavior between groups.

Key Metrics

Average number of participations per user
Percentage of users who participate more than once
Fun & motivation score ("This experience was more enjoyable")

What We Test

Whether gamification
→ turns one-time participation into repeated behavior

Hypothesis

Case 3

Sense of Belonging, Ownership, and Impact Drives Voluntary Participation

Hypothesis

Citizens are more willing to participate voluntarily when they feel they are part of real urban change, not just submitting opinions.

Validation Method

Scenario-based survey experiment
"Your proposal will be reviewed and the result will be announced."
Participants compare both scenarios and respond.

Key Metrics

Voluntary participation intention (5-point Likert scale)
Perceived belonging & impact score
Active participation willingness rate

What We Test

Whether emotional connection
→ increases intrinsic motivation to participate
