# Crime Hotspot Analyzer

G, Kyle, Saksham, Aidan

Jooyoung Park, Suah Koh, Gaeul kim, Sol Yoo, Yujeong An

01

# Problem statement

## Urban Travel Anxiety

People don't have an easy way to see **crime concentration** in their city

## Existing Navigation Tool

Existing navigation apps focus on **speed**, not **personal safety**

## Result

**Unnecessary anxiety and risk,** especially at night or in unfamiliar neighborhoods

02

# Project Goals - Solution

## Real-Time Safety Navigation

Deliver live crime heatmaps and optimized safety routing for the Seattle-Bellevue area.

## Actionable Data Insights

Transform complex public crime data into simple, intuitive, and actionable visuals.

## Empowered Decision Making

Supports commuters, night-shift workers, and security teams in making safer travel choices.

The **KAGS Crime Hotspot Analyzer** aims to enhance urban safety by providing real-time heatmaps, safer routing options, and improved awareness, ultimately reducing user anxiety in navigating city environments.

03

## Why does it matter?

- Safety is more important than speed for some people.
- Anxiety and fear affect daily life and mobility.
- People cannot easily access or make effective use of existing public crime data.

# Functional Requirements Overview

## User Flows

Ensuring a **seamless, intuitive interface** that prioritizes **critical safety insights** and **optimized routing options**.

## Heatmap Logic

Transforming complex crime data into **intuitive heatmaps** for proactive safety awareness and **optimized urban navigation**.

## Filtering

Providing **user-defined filtering** of crime data to ensure a **personalized and proactive approach** to urban safety.

## Map Load Time

Ensuring seamless navigation by maintaining a strict 5-second threshold for all map loading processes.

## Route Calculation

Optimizing system response to under 3 seconds for seamless, safety-first urban navigation.

## Data Security

Ensuring maximum data security and privacy with HTTPS-encrypted communications to reinforce platform integrity.

## Essential Data Requirements for MVP

### Crime Records

Leveraging comprehensive crime data to analyze historical trends and establish smarter urban safety response strategies.

### Street Networks

Utilizing precise street network data to identify safe pathways and optimize urban navigation strategies.

### Gridding & Analytics

Integrating spatial gridding and analytics to visualize crime hotspots for data-driven safety route planning.

07

# User Experience and Key Feature

| Competitor | Strengths        | Weaknesses            | Our Solution                   |
|------------|------------------|-----------------------|--------------------------------|
| LexisNexis | Verified Data    | No Routing/Prediction | Predictive Hotspots            |
| SpotCrime  | Simple UI        | Cluttered, No ML      | ML-Powered Heatmaps            |
| Citizen    | Real-time Alerts | Anxiety-inducing      | Calm, Data-Driven Insights     |
| Our App    | Total Solution   | Limited Region (MVP)  | Prediction + Routing + Clarity |

08

# Competitive Analysis

The Crime Hotspot Analyzer addresses the **critical visibility gaps** identified in current market competitors to **redefine urban safety**.

- She moved to Bellevue from another state and **feels scared walking at night** where she **doesn't know well**.
- She **want to see on a map** where crimes have occurred, but it's **not easy to do**.

**Chloe**

College Student

- He frequently stays in **short-term rentals** for projects and **doesn't know each neighborhood well**.
- He often **travels late at night** with **expensive gear** and wants a **map of crime hotspots** to choose a **safer route**.

**Jaden**

freelance video editor

- He is a **father living in Bellevue** with his wife and two daughters
- He **checks crime data** around his home, his daughters' schools, and places they visit to **identify risks** and **suggest safer routes and areas**.

**Andrew**

amazon worker

10

## Future plan - Field Research

Users will choose a safer route if provided with public safety information before their journey.

### Existing Navigation (Speed Focused)

- Shortest Path: 20 min
- No safety data provided

### KAGS (Safety Focused)

- Optimized Safe Route: 30 min
- Avoids High Crime Zones  
(Live Heatmap)

# Thank you for listening
