

Winter Global Education Project Group 2

Analysis of persona and pane points

BRAND INTRODUCTION

The current plan to make the structure clear and fast,
It is focused on making participation easier.

BRAND INTRODUCTION

The current plan to make the structure clear and fast,
It is focused on making participation easier.

Focus on 'Making Participation Easy'

BRAND INTRODUCTION

The That's why we have a platform where citizens can participate easily,
We need something to move people's minds, a plan

BRAND INTRODUCTION

The That's why we have a platform where citizens can participate easily,
We need something to move people's minds, a plan

If then

What can move citizens' hearts?
What kind of motivation can you make for me?

BRAND INTRODUCTION

Case Study Presented Last Feedback Time, Parking Enforcement

Insight is the experience that my report was applied

CASE STUDY

: illegal parking report

In order to move citizens' minds, they want not only practical policy participation,
but also a sense that they are creating their own space.

BRAND INTRODUCTION

Many examples of games based on ownership and influence,
Transform and grow space with one's own small actions

Writing / Attendance / Comments → level rise →
Background, function, mood change

My activities grow the space

Decorating houses / Communication with residents
→ Change in the response of residents

This island is the world I made

BRAND INTRODUCTION

Many examples of citizen participation-based engagement,
Transform and create space with people's own actions

Citizen pain point-based engagement, new redefinition of outcomes is needed

Participation

Submission of Opinions

the act of growing urban
space together

Writing / Attendance
Background, function

My activities grow the space

Result

administrative processing

The experience that our
neighborhood is changing

with residents
S

This island is the world I made

David Kim

Age: 54

Location: Bellevue

Former IT industry professional

Languages: English, Korean

**“Sharing my opinion isn’t hard.
The problem is I can’t see what happens next.”**

PAIN POINT

Civic Engagement Platform Oversimplified

survey-oriented structure

a lack of depth of opinion

Policy suggestions do not connect to execution phase

Lack of space for technical and administrative context

NEEDS

Refined Policy Proposition Structure

Visualizing the connection between

citizen opinion and administrative logic

Idea → Review → Clear reflection/pending flow

PAIN POINT

psychological distancing to

public platforms

UX/UI Shortage for 2030 Generation

lack of accessibility and familiarity

NEEDS

Intuitive delivery of benefits to individuals

Provides key summary-oriented information

an interesting contributor

Emily Park

Age: 27

Location: Seattle

Occupation: Office worker

Language: English

**“I get that it matters, but
why is this important to me?”**

Users who want to participate in the urban transformation process and recognize the results as 'traces of my making'

This project targets the point where citizens are not viewed as 'reporters',
but as 'people who make their own space where I stay'.
This project redefined civic participation as a process for citizens to grow the
space of the city together, not as an act of 'opinion'.

Hypothesis 1

Visibility of Post-Participation Processes Increases Re-Engagement

Hypothesis

When citizens can clearly see what happens after they submit a proposal, they are more likely to participate again.

Validation Method

A: Only shows
"Submission Completed"
B: Shows a timeline
Submitted → Reviewed →
Discussed → Implemented
/ On Hold
Participants review both
screens and answer a
survey.

Key Metrics

Re-engagement
intention (5-point Likert
scale)
Agreement rate with "I
would participate again"
Platform trust score

What We Test

Whether visualizing the
process
→ increases trust and re-
participation intent

Hypothesis 2

Gamification Encourages Sustained Civic Participation

Hypothesis

Civic participation is more likely to continue when it feels motivating and rewarding, rather than purely obligatory.

Validation Method

Short-term participation experiment (approx. 1 week)

Group A: No rewards

Group B: Points or badges for each contribution

Compare participation behavior between groups.

Key Metrics

Average number of participations per user
Percentage of users who participate more than once

Fun & motivation score ("This experience was more enjoyable")

What We Test

Whether gamification
→ turns one-time participation into repeated behavior

Hypothesis 3

Sense of Belonging, Ownership, and Impact Drives Voluntary Participation

Hypothesis

Citizens are more willing to participate voluntarily when they feel they are part of real urban change, not just submitting opinions.

Validation Method

Scenario-based survey experiment
"Your proposal will be reviewed and the result will be announced."
Participants compare both scenarios and respond.

Key Metrics

Voluntary participation intention (5-point Likert scale)
Perceived belonging & impact score
Active participation willingness rate

What We Test

Whether emotional connection
→ increases intrinsic motivation to participate

This project does not aim to build features that simply encourage citizen participation. **Instead, it focuses on developing an MVP to validate the sense of ownership and impact that has not been formed after participation.**

MVP Development Plan

UI Design: Figma

Experiment Execution: Survey-based user testing

Analysis Method: Comparison of 5-point Likert scale averages / Comparison of response rates between groups

MVP Development Timeline

Define MVP scope
Design UI wireframes

Develop prototypes
Design survey questions

Conduct user testing
Collect data

Analyze results
Derive insights and define improvement directions
